

NEXT GENERATION OF FOAM PRODUCTION

Now with an Australian & New Zealand install base

Location Auckland, New Zealand
Industry Oil & Gas
Client Fuel Terminal

APPLICATION

A refining company based in New Zealand recently installed the Turbinator, via an engineering consultant. Below are their comments on the unit.

- **What was the main driving factor behind purchasing the Turbinator unit?** Price
- **Why did you ultimately choose the Turbinator for these upgrades?** We chose the Turbinator due to the smaller footprint required, the similar proportioning accuracy to a balanced-pressure (BPP) type system, and the simplicity of operation/installation.
- **Do you feel this was the right decision?** Yes. We have commissioned/tested a number of different systems in the past 4 years (BPP, bladder tank, inductor, etc.) and the Turbinator worked first time and worked well.
- **How difficult was the unit to install?** Other than requiring its own support structure, we feel the unit was simple to install.
- **How have these units been performing, since being in commissioned at each of the sites?** The first unit has only been installed for a year so can't really comment on this.
- **Did HMA Instrumentation offer support and a defined point of contact for this project?** Yes, we have been very satisfied with HMA's service to date
- **Do you feel HMA Instrumentation delivered on what they offered originally?** Yes, HMA have delivered on the offer. Delivery of product was ahead of schedule
- **Do both you & your customer personnel feel satisfied with the product provided?** Yes, we are very satisfied with the product.

FEATURES & BENEFITS

- The Turbinator is now recommended for foam proportioning by Engineering Consultancies
- Shorter lead-times with mass production
- Local technical support staff in both NZ & Australia
- Much smaller footprint than other foam proportioning systems
- Simple installation & operation
- Similar proportion accuracy as a typical balanced-pressure system
- Works well the first time

HMA Instrumentation are the exclusive representative of Knowsley SK in both Australia & New Zealand. For more information on the Turbinator and other Knowsley SK fire fighting products please contact us or visit our website.
