

Multiple-Point Measurement for Accurate Volume

Get connected to your inventory with the only level sensor that measures and maps multiple points on the material surface. A 3D image representing the topography inside the silo indicates buildup, cone up or down conditions. 3DVision software accounts for irregular material surfaces when calculating volume.

The 3DLevelScanner's acoustics-based technology penetrates dust ensuring reliable measurements. This non-contact technology accurately measures solids and powders, including low dielectric materials.

And you can get it only from BinMaster.

HOW 3D LEVEL SCANNING WORKS

The 3DLevelScanner uses acoustics-based technology.

Three transducers send very low frequency sound waves to the material surface. The sensor receives echoes back from multiple points on the surface which are converted to distance measurements.

Advanced algorithms in the software assign each measurement an XYZ coordinate that is mapped

into a 3D image. The software generates a graphical representation of the material topography in the bin.

Surface variations are accounted for in volume calculations.

3DLEVELSCANNER ANATOMY

3 independent transducers ensure accuracy

WHAT MAKES THE 3DLEVELSCANNER UNIQUE

- Measures multiple points on the material surface
- Generates a 3D image of the material topography
- Volume accuracy surpasses any single-point device
- Reports minimum, maximum, and average distances
- Detects cone up or down conditions
- Sees sidewall buildup that could cause structural damage
- Measures topography in segmented silos
- Accurate volume in large bins using multiple scanners

INDUSTRIES AND APPLICATIONS

3D Excels in Many Industries and Materials

Grain, Seed, & Feed

Corn, soybeans, wheat, rice, or milo used in human and animal food production.

Mining & Metals

Fine powders such as bauxite, bentonite, alumina, potash, talc, or calcium carbonate.

Cement & Concrete

Measuring limestone, aggregates, clinker, and finished cement.

Coal Power Plants

A popular sensor for measuring coal and fly ash silos at power plants.

Ethanol & Bioenergy

Accurate volume for corn storage and measuring dried distiller's grains.

Food or Beverage Processing

Non-contact measurement of ingredients like flour, salt, sugar, or cocoa.

Sand & Aggregates

Glass manufacturing and measuring sand and rock, excelling in frac or silica sand.

Chemical Processing

Materials used in the making of paints, fertilizers, or detergents.

Pulp, Paper & Wood

Pellets, biomass, wood chips, or sawdust used in making paper, furniture, or biofuels.

Plastics Manufacturing

Resins of all types including pellets, flakes, and powders, or powders with a low dielectric.

Construction Materials

Silos containing roofing granules and gypsum for making drywall.

3D MAKES A DIFFERENCE

Dust Penetrating	Reliable operation and level measurement in suspended dust.
Multiple Measurements	The only level sensor to detect surface variations.
Volume Accuracy	Considers irregular material topography in calculating volume.
Non-Contact	No risk of contamination or interference with equipment inside the bin.
Detects Silo Buildup	Detects and alerts to excessive piling that could stress silo walls.
Low Maintenance	No air purge needed for self cleaning transducers that resist dusty buildup.

Fully operational sensor on cement silo despite aggressive dust.

Exterior of the sensor is coated with dust, while self-cleaning properties keep the transducers clean and functional.

Detects irregular topography and reflects it in the 3D image.

3D MODEL SELECTION GUIDE

M Maps and Measures

The M model takes measurements within a 70° beam angle. It reports the highest, lowest, and average level. 3DVision software provides highly accurate level and volume data.

MV Adds 3D Image

The MV has all the capabilities of the M model, but also generates a 3D representation of the material surface. Plants that work with materials that bridge, rat hole, or build up along bin walls may prefer to add 3D imagery.

MVL Measures Big Bins

The MVL provides volume accuracy in large diameter bins. Multiple scanners are

mounted in strategic locations to account for surface variations across the material surface. The software synchronizes the level data from all sensors to create a single 3D image and calculate bin volume.

RL Single-Point Measurement

The RL model measures in a 15° beam angle and reports a single distance.

It excels in harsh, high dust environments and problematic low dielectric materials. It provides highly reliable level data and is often used in narrow silos or silos with structure.

3D USE GUIDELINES

Selecting the Best Model for Your Application

Model	M	MV	MVL
Bin Height	Up to 200' tall	Up to 200' tall	Up to 200' tall
Bin Diameter	10' diameter is the minimum	10' diameter is the minimum	10' diameter is the minimum
Beam Angle	70°	70°	70°
3D Visualization	No	Yes	Yes
Output Data	Volume plus minimum, maximum, and average distance	3D visualization, volume plus minimum, maximum, and average distance	Volume plus minimum, maximum, and average distance
Best Application	Wide bins, taller than they are wide	Wide bins, taller than they are wide	Very wide bins, bins with multiple filling or discharge points

The M and MV can be used on larger diameter bins than specified, but with decreased accuracy since the beam angle will not span the entire surface. The MVL is used on large diameter bins to increase volume accuracy.

HT High Temperature Applications

With an operating temperature up to 356°F (180°C), the HT model is suited for materials like clinker, fly ash, frac sand, and alumina.

TC Teflon-Coated Transducer

The TC model features a buildup resistant Teflon-coated transducer to ensure reliable measurement and low maintenance in sticky or clingy materials like soybean meal, sugar, or flour.

View Multiple Bins in a Single Screen

Installed on a local network, easy-to-use MultiVision software gives plants the ability to view multiple bins in a single window. Automated

high or low-level alerts simplify inventory oversight. With one click, users can zoom into detailed information and the 3D profile for a single bin.

Why Plants Like MultiVision

- All users view the same inventory data
- Inventory is updated automatically
- Each user can customize their screen
- Compatible with all 3DLevelScanner models
- Reporting for purchasing, finance, and logistics

MOUNTING AND ACCESSORIES

0° Mounting Flange

The 3DLevelScanner mounts through an 8-1/2" or larger opening in the bin roof. To secure and stabilize the sensor on flat bin roofs, a 0° mounting flange is used to suspend the transducer into the bin while keeping the sensor head outside of bin for programming access.

Angled Mounting Flange

It is essential the 3DLevelScanner is mounted vertically and perpendicular to the ground. To ensure the sensor is mounted properly on angled bin roofs, BinMaster offers mounting flanges for 5°, 10°, 15°, 20° and 30° angles.

Neck Extensions

The 3DLevelScanner optional neck extensions are used to lower the transducer assembly below structure or obstacles that may interfere with operation. Neck extensions also are used for mounting on thick cement bin roofs or on a raised socket where distancing the head from the transducer is necessary. Neck extensions come in 1', 2', 4', 6', and 10' lengths.

Measurement Characteristics	
Frequency	2 to 10 kHz
Beam angle	15 to 70 degrees
Materials, Non-Wetted Parts	
Housing	Painted aluminum die casting
Inspection Window in Housing Cover	Polycarbonate
Antenna	Painted aluminum die casting
Flange	Steel
Weight	
12.3 lb (5.6 kg)	
Output Variable	
Output Signal ⁴	- 20 mA/HART, RS-485, Modbus RTU, TCP/IP
Resolution ¹	0 μ A
Fault Signal ^C	urrent output unchanged, 22 mA > 3.6 mA (adjustable)
Current Limitation	22 mA
Load	
4-wire sensor	Max. 500 Ohm
Ambient Conditions	
Ambient, storage and transport temperature	
Relative humidity	20% to 85%
Altitude	16,400 ft (5,000 m)
Process Conditions	
Vessel Pressure	-0.2 to 3 bar (-2.9 to 41.5 psi or -20 to 100 kPa)
Process Temperature	
Measured on the Process Fitting	-40° to +185° F (-40° to 85° C) Standard, -40° to +356° F (-40° to 180° C) High Temperature
Vibration Resistance	Mechanical vibrations with 2 g and 5 to 200 Hz
Electromechanical Data	
Cable Entry/Plug	1 x cable entry M20x1.5 (cable- \varnothing 8 to 12mm) 1 x blind stopper M20x1.5 OR 2 x cable entry 1/2 NPT
Display Panel	
LCD	4 lines x 20 characters
Adjustment Elements ⁴	4 keys
Protection ^I	P67
Power supply – 4-wire instrument (Active) 4 - 20 mA / HART	
Supply Voltage	20 to 32 VDC
Power Consumption ^M	ax. 1.5 W @ 24 VDC
Electrical Protective Measures	
Protection ^I	P67 according to IEC 60529
Approvals
